A Journal of Psychiatric Neuroscience and Therapeutics

Volume 72, Number 10, November 15, 2012

SUBSTANCE ABUSE AND PSYCHOSIS

IN THIS ISSUE – NOVEMBER 15TH

795 A brief summary of the articles appearing in this issue of *Biological Psychiatry*.

COMMENTARIES

797 Psychotomimetic Effects of Kappa Opioid Receptor Agonists

Kate L. White and Bryan L. Roth

» See companion article on page 871

799 Progress in Gene Environment Studies

Marco P. Boks

» See companion article on page 811

801 Cognitive Consequences of Alterations in Functional Circuitry Induced by Chronic Cocaine Use and the Potential Impact for Treatment

Stacy A. Castner and Graham V. Williams

» See companion article on page 856

PRIORITY COMMUNICATIONS

803 Proenkephalin Mediates the Enduring Effects of Adolescent Cannabis Exposure Associated with Adult Opiate Vulnerability

Hilarie C. Tomasiewicz, Michelle M. Jacobs, Matthew B. Wilkinson, Steven P. Wilson, Eric J. Nestler, and Yasmin L. Hurd

811 Confirmation that the *AKT1* (rs2494732) Genotype Influences the Risk of Psychosis in Cannabis Users

Marta Di Forti, Conrad Iyegbe, Hannah Sallis, Anna Kolliakou, M. Aurora Falcone, Alessandra Paparelli, Miriam Sirianni, Caterina La Cascia, Simona A. Stilo, Tiago Reis Marques, Rowena Handley, Valeria Mondelli, Paola Dazzan, Carmine Pariante, Anthony S. David, Craig Morgan, John Powell, and Robin M. Murray

» See commentary on page 799

REVIEW

817 The Potential Role of the Striatum in Antisocial Behavior and Psychopathy

Andrea L. Glenn and Yaling Yang

ARCHIVAL REPORTS

823 The Monoamine Stabilizer (-)-OSU6162 Attenuates Voluntary Ethanol Intake and Ethanol-Induced Dopamine Output in Nucleus Accumbens

Pia Steensland, Ida Fredriksson, Sarah Holst, Kristin Feltmann, Johan Franck, Björn Schilström, and Arvid Carlsson

832 Cigarette Smoking Predicts Differential Benefit from Naltrexone for Alcohol Dependence

Lisa M. Fucito, Aesoon Park, Suzy Bird Gulliver, Margaret E. Mattson, Ralitza V. Gueorguieva, and Stephanie S. O'Malley

839 Fetal Programming Effects of Testosterone on the Reward System and Behavioral Approach Tendencies in Humans

Michael V. Lombardo, Emma Ashwin, Bonnie Auyeung, Bhismadev Chakrabarti, Meng-Chuan Lai, Kevin Taylor, Gerald Hackett, Edward T. Bullmore, and Simon Baron-Cohen

848 High Versus Low Level of Response to Alcohol: Evidence of Differential Reactivity to Emotional Stimuli

Martin P. Paulus, Marc A. Schuckit, Susan F. Tapert, Neil J. Tolentino, Scott C. Matthews, Tom L. Smith, Ryan S. Trim, Shana A. Hall, and Alan N. Simmons

856 Effects of Chronic Cocaine Self-Administration on Cognition and Cerebral Glucose Utilization in Rhesus Monkeys

Robert W. Gould, H. Donald Gage, and Michael A. Nader

» See commentary on page 801

864 Disruption of Visuospatial and Somatosensory Functional Connectivity in Anorexia Nervosa

Angela Favaro, Paolo Santonastaso, Renzo Manara, Romina Bosello, Giulia Bommarito, Elena Tenconi, and Francesco Di Salle

871 Dose-Related Behavioral, Subjective, Endocrine, and Psychophysiological Effects of the κ Opioid Agonist Salvinorin A in Humans

Mohini Ranganathan, Ashley Schnakenberg, Patrick D. Skosnik, Bruce M. Cohen, Brian Pittman, R. Andrew Sewell, and Deepak Cyril D'Souza

» See commentary on page 797

880 Distinct Age-Dependent Effects of Methylphenidate on Developing and Adult Prefrontal Neurons

Kimberly R. Urban, Barry D. Waterhouse, and Wen-Jun Gao

CORRESPONDENCE

 **e21 On Cue: Striatal Ups and Downs in Addictions**

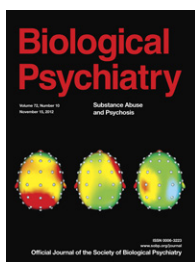

Marco Leyton and Paul Vezina

 **e23 Right on Cue? Striatal Reactivity in Problem Gamblers**

Ruth J. van Holst, Dick J. Veltman, Wim van den Brink, and Anna E. Goudriaan

 **e25 Attending to Striatal Ups and Downs in Addictions**

Iris M. Balodis, Hedy Kober, Patrick D. Worhunsky, Michael C. Stevens, Godfrey D. Pearlson, and Marc N. Potenza

The topographic maps on the cover, from Figure 5B in Ranganathan *et al.* (pages 871-879, in this issue), show grand-averaged β -band spectral power during placebo (left), low dose Salvinorin A (middle) and high dose Salvinorin A (right). The authors found that Salvinorin A administration induced reductions in resting β -band electroencephalographic spectral power.
