CORTICOTROPIN-RELEASING FACTOR, FKBP5, AND POSTTRAUMATIC STRESS DISORDER

IN THIS ISSUE - SEPTEMBER 1ST

339 A brief summary of the articles appearing in this issue of *Biological Psychiatry*.

COMMENTARIES

340 Corticotropin-Releasing Factor From Rodents to Primates: Translational Hope Expresses Itself, Pun Intended

George F. Koob

» See corresponding article on page 345

343 Gain in Translation: Is It Time for Thigmotaxis Studies in Humans?

Christian Grillon and Monique Ernst

» See corresponding article on page 390

PRIORITY COMMUNICATION

345 Overexpressing Corticotropin-Releasing Factor in the Primate Amygdala Increases Anxious Temperament and Alters Its Neural Circuit

Ned H. Kalin, Andrew S. Fox, Rothem Kovner, Marissa K. Riedel, Eva M. Fekete, Patrick H. Roseboom, Do P.M. Tromp, Benjamin P. Grabow, Miles E. Olsen, Ethan K. Brodsky, Daniel R. McFarlin, Andrew L. Alexander, Marina E. Emborg, Walter F. Block, Julie L. Fudge, and Jonathan A. Oler

» See commentary on page 340

ARCHIVAL REPORTS

356 Interactions Between Anandamide and Corticotropin-Releasing Factor Signaling Modulate Human Amygdala Function and Risk for Anxiety Disorders: An Imaging Genetics Strategy for Modeling Molecular Interactions

Catherine H. Demers, Emily Drabant Conley, Ryan Bogdan, and Ahmad R. Hariri

363 Posttraumatic Stress Disorder as a Catalyst for the Association Between Metabolic Syndrome and Reduced Cortical Thickness

Erika J. Wolf, Naomi Sadeh, Elizabeth C. Leritz, Mark W. Logue, Tawni B. Stoop, Regina McGlinchey, William Milberg, and Mark W. Miller

372 Holocaust Exposure Induced Intergenerational Effects on *FKBP5* Methylation

Rachel Yehuda, Nikolaos P. Daskalakis, Linda M. Bierer, Heather N. Bader, Torsten Klengel, Florian Holsboer, and Elisabeth B. Binder

381 Neural Reactivity to Emotional Stimuli Prospectively Predicts the Impact of a Natural Disaster on Psychiatric Symptoms in Children

Autumn Kujawa, Greg Hajcak, Allison P. Danzig, Sarah R. Black, Evelyn J. Bromet, Gabrielle A. Carlson, Roman Kotov, and Daniel N. Klein

390 A Human Open Field Test Reveals Thigmotaxis Related to Agoraphobic Fear

Nora Walz, Andreas Mühlberger, and Paul Pauli

» See commentary on page 343

398 Disadvantage of Social Sensitivity: Interaction of Oxytocin Receptor Genotype and Child Maltreatment on Brain Structure

Udo Dannlowski, Harald Kugel, Dominik Grotegerd, Ronny Redlich, Nils Opel, Katharina Dohm, Dario Zaremba, Anne Grögler, Juliane Schwieren, Thomas Suslow, Patricia Ohrmann, Jochen Bauer, Axel Krug, Tilo Kircher, Andreas Jansen, Katharina Domschke, Christa Hohoff, Pienie Zwitserlood, Markus Heinrichs, Volker Arolt, Walter Heindel, and Bernhard T. Baune

406 Sex-Specific Effects of Stress on Oxytocin Neurons Correspond With Responses to Intranasal Oxytocin

Michael Q. Steinman, Natalia Duque-Wilckens, Gian D. Greenberg, Rebecca Hao, Katharine L. Campi, Sarah A. Laredo, Abigail Laman-Maharg, Claire E. Manning, Ian E. Doig, Eduardo M. Lopez, Keenan Walch, Karen L. Bales, and Brian C. Trainor

CORRESPONDENCE

e29  FKBP5 Messenger RNA Increases After Adolescence in Human Dorsolateral Prefrontal Cortex

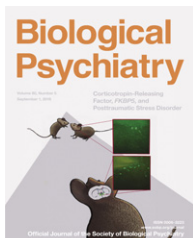

Cynthia Shannon Weickert, Maree J. Webster, Danny Boerigter, and Duncan Sinclair

e33  Reproducibility and Visual Inspection of Data

Clark D. Jeffries and Diana O. Perkins

e37  Reply to: Reproducibility and Visual Inspection of Data

Linda M. Brzustowicz, Michael P. Moreau, Shannon E. Bruse, Richard David-Rus, and Steven Buyske

The image on the cover represents work conducted by Steinman *et al.* (in this issue, pages 406–414). The authors found that social defeat stress in female mice increased the activity of oxytocin neurons in the bed nucleus of the stria terminalis (as shown in the foreground), compared to unstressed female mice (as shown in the background). Administration of intranasal oxytocin also showed sex-specific effects, suggesting that the oxytocin system may contribute to differential responses to stress between the sexes. Image courtesy of Natalia Duque-Wilckens.
