ERRATA

512 Erratum to: The Role of Synaptic Cell Adhesion Molecules and Associated Scaffolding Proteins in Social Affiliative Behaviors

512 Erratum to: Delineating the Shared Genetics Across the Mood Disorders Spectrum

There are many layers of complexity in living tissue and the body. With the repetitive drawings of small cell–like bodies, the artist wanted to emphasize the abstraction and accumulation of these shapes, and reference the view of looking through a microscope to understand the physicality of these structures. The drawing was done using marker on paper, by Jessica Johnson in the Department of Genetics and Genomic Sciences at the Icahn School of Medicine.

The *Journal* extends its sincere thanks to Veronica Szarejko, curator of the Art of the Brain Exhibition at The Friedman Brain Institute at the Icahn School of Medicine at Mount Sinai, for facilitating our selection of this art from the exhibit.
