

Biological Psychiatry

A Journal of Psychiatric Neuroscience and Therapeutics

Aims and Scope

Published since 1969

Biological Psychiatry is an official journal of the Society of Biological Psychiatry, whose purpose is to promote excellence in research investigating the nature, causes, mechanisms, and treatments of disorders of thought, emotion, and behavior. In accord with this mission, this peer-reviewed, rapid publication, international journal publishes both basic and clinical contributions from all disciplines and research areas relevant to the pathophysiology and treatment of major psychiatric disorders.

Biological Psychiatry publishes novel results of original research that represent an important new lead or significant impact on the field, particularly those addressing genetic and environmental risk factors, neural circuitry and neurochemistry, and important new therapeutic approaches. Reviews and commentaries that focus on topics of current research and interest are also published.

Editor

John H. Krystal, MD
Yale University School of Medicine
VA Connecticut Healthcare System
West Haven, Connecticut

Deputy Editors

Anissa Abi-Dargham, MD
Stony Brook, New York

Deanna M. Barch, PhD
