ERRATA

335 Erratum to: Boosting Schizophrenia Genetics by Utilizing Genetic Overlap With Brain Morphology

335 Erratum to: Sex and the Brain: Novel ADNP Syndrome Mice Are Protected by NAP

The cover art image depicts left hippocampal shape differences in schizophrenia, as identified by Roeske *et al.* (in this issue, pages 314–322). Hippocampal surfaces, composed of more than 40,000 individual vertices, revealed inward (blue/green coloration) and outward (red/yellow) displacements in persons with schizophrenia as compared to healthy control individuals. The authors identified incomplete hippocampal inversion, a marker of abnormal hippocampal development, as a new mechanism for hippocampal shape deformations in schizophrenia.
