A Journal of Psychiatric Neuroscience and Therapeutics

Volume 93, Number 1, January 1, 2023

## GENETICS AND NEURODEVELOPMENT IN PSYCHIATRY

### IN THIS ISSUE - JANUARY 1ST

- 1 **A brief summary of the articles appearing in this issue of *Biological Psychiatry*.**

### COMMENTARIES

- 2 **Genome-wide Association Study in a Dish Provides New Insights Into an Old Medication**  
*Ley Nadine Lacbawan and Francis J. McMahon*  
» See corresponding article on page 8
- 4 **Broadening the Use of Machine Learning in Psychiatry**  
*Brendan D. Adkinson and Adam M. Chekroud*  
» See corresponding article on page 18
- 6 **Direct and Indirect Effects in Trio Studies: You Don't Know What You're Missing**  
*Dongmei Yu and Jeremiah M. Scharf*  
» See corresponding article on page 37

### PRIORITY COMMUNICATION

- 8 **Cellular Genome-wide Association Study Identifies Common Genetic Variation Influencing Lithium-Induced Neural Progenitor Proliferation**  
*Justin M. Wolter, Brandon D. Le, Nana Matoba, Michael J. Lafferty, Nil Aygün, Dan Liang, Kenan Courtney, Juan Song, Joseph Piven, Mark J. Zylka, and Jason L. Stein*  
» See commentary on page 2

### REVIEW

- 18 **Leveraging Machine Learning for Gaining Neurobiological and Nosological Insights in Psychiatric Research**  
*Ji Chen, Kaustubh R. Patil, B.T. Thomas Yeo, and Simon B. Eickhoff*  
» See commentary on page 4

### ARCHIVAL REPORTS

- 29 **Pervasive Downward Bias in Estimates of Liability-Scale Heritability in Genome-wide Association Study Meta-analysis: A Simple Solution**  
*Andrew D. Grotzinger, Javier de la Fuente, Florian Privé, Michel G. Nivard, and Elliot M. Tucker-Drob*
- 37 **Investigating Direct and Indirect Genetic Effects in Attention-Deficit/Hyperactivity Disorder Using Parent-Offspring Trios**  
*Joanna Martin, Matthew Wray, Sharifah Shameem Agha, Katie J.S. Lewis, Richard J.L. Anney, Michael C. O'Donovan, Anita Thapar, and Kate Langley*  
» See commentary on page 6
- 45 **Genetic Heterogeneity Shapes Brain Connectivity in Psychiatry**  
*Clara A. Moreau, Annabelle Harvey, Kuldeep Kumar, Guillaume Huguet, Sebastian G.W. Urchs, Elise A. Douard, Laura M. Schultz, Hanad Sharmarke, Khadije Jizi, Charles-Olivier Martin, Nadine Younis, Petra Tamer, Thomas Rolland,*

Jean-Louis Martineau, Pierre Orban,  
Ana Isabel Silva, Jeremy Hall,  
Marianne B.M. van den Bree, Michael J. Owen,  
David E.J. Linden, Aurelie Labbe, Sarah Lippé,  
Carrie E. Bearden, Laura Almasy,  
David C. Glahn, Paul M. Thompson,  
Thomas Bourgeron, Pierre Bellec, and  
Sebastien Jacquemont

**59 Genome-wide Association Study Shows  
That Executive Functioning Is Influenced by  
GABAergic Processes and Is a  
Neurocognitive Genetic Correlate of  
Psychiatric Disorders**

Alexander S. Hatoum, Claire L. Morrison,  
Evann C. Mitchell, Max Lam,  
Chelsie E. Benca-Bachman,  
Andrew E. Reineberg, Rohan H.C. Palmer,  
Luke M. Evans, Matthew C. Keller, and  
Naomi P. Friedman

**71 Fragile X Syndrome Patient-Derived  
Neurons Developing in the Mouse Brain  
Show *FMR1*-Dependent Phenotypes**

Marine A. Krzisch, Hao Wu, Bingbing Yuan,  
Troy W. Whitfield, X. Shawn Liu, Dongdong Fu,

Carrie M. Garrett-Engele, Andrew S. Khalil,  
Tenzin Lungjangwa, Jennifer Shih,  
Aaron N. Chang, Stephen Warren,  
Angela Cacace, Kristin R. Andrykovich,  
Rosalie G.J. Rietjens, Owen Wallace,  
Mriganka Sur, Bhav Jain, and Rudolf Jaenisch

**82 Circulating Proteins Influencing Psychiatric  
Disease: A Mendelian Randomization Study**

Tianyuan Lu, Vincenzo Forgetta,  
Celia M.T. Greenwood, Sirui Zhou, and  
J. Brent Richards

**92 Sensory Over-responsivity: A Feature of  
Childhood Psychiatric Illness Associated  
With Altered Functional Connectivity of  
Sensory Networks**

Rebecca F. Schwarzlose, Rebecca Tillman,  
Caroline P. Hoyniak, Joan L. Luby, and  
Deanna M. Barch

**CORRESPONDENCE**

**e1 Big or Little Data for Magnetic Resonance  
Imaging Research in Psychiatry?**

Ardesheer Talati, Milenna T. van Dijk, and  
Myrna M. Weissman

In this issue, Krzisch *et al.* (pages 71–81) transplanted neural precursor cells derived from fragile X syndrome patients into the mouse brain. These precursors migrated throughout the brain and differentiated into neurons and glial cells, and the neurons showed accelerated maturation after an initial delay. The figure on the cover shows immature doublecortin-labeled FXS (red) and control (green) neurons in the mouse brain. See Figure 1 for complete details.
